NEW METHOD OF HIGH-GRADE DISTILLATION OF  
LIQUIDS. [1963] [6p]  
Order from OTS, SLA, or ETC \$1.10 TT-63-20794

Trans. of Akad[emiya] Nauk SSSR. Doklady, 1949,  
v. 64, no. 3, p. 357-360. (Abstract available)

DESCRIPTORS: \*Distillation, Liquids, Water,  
Pressure, Vaporization, Gas flow,

The liquid is evaporated at a temperature lower than  
its boiling temperature under atmospheric pressure,  
with a stream of purified air sweeping its surface to  
carry off the vapor. The rate of distillation at a given  
temperature increases with the velocity of the air  
stream particularly at low velocities and tends to level  
off as the velocity is increased. Water distilled once  
by this method has an electrical conductivity of  
 $0.5 \times 10^{-6} \text{ ohm}^{-1}$ , i.e., a purity of the same order as  
(Chemistry--Physical, TT, v. 11, no. 4) (over)
